SUBJECT INDEX

Activation energies 23
Aniline, selectivity of Mu(T) addition between inequivalent sites in 25
Asymmetrical iso-valence dimer 233–234

Bichromophore compounds 234–235
Breit–Rabi diagram 4

Chemical oxidation 58
Chemical reduction 58
CIDEP 80, 84, 91, 100, 110, 133
  radical pair 110–15
CIDNP 133
cis–trans isomerizations 31–33
1,5-Cyclization reactions 35
Cyclohexadienyl radicals 37
Cyclopropyl ring fission 35
2-cyclopropylpropene 36

Diffusion coefficients 105
Diffusion controlled reactions, electron paramagnetic resonance (EPR) 105–110
2,3-Dimethylbutadiene (DMBD) 37

Electrolysis 59
Electron accelerators 57
Electron paramagnetic resonance (EPR) 59–62
  crystal noise 63–64
  detector bandwidth 69–71
  detector dead time 68
  diffusion controlled reactions 105–110
  direct detection 62
  field/frequency stability 72–73
  instrument limitations 71–72
  microwave cavity characteristics 64–66
  microwave field amplitude 66–68
  molecular dynamics 99–115
  optically detected 74–75
  photochemistry 83–99
  photosynthesis 92–99
  pulse detection 62–63
  radiation chemistry 78–83
  relaxation phenomena 100–105
  resolution 71
  response time 66
  sample fatigue 73
  sample limitations 72
  sensitivity 63
  steady state studies 79–80
  time-resolved studies 80–3
Electron spin relaxation 100
Electron transfer reactions 28–31
  backward 235–237
  biomolecular, from bulk 235–237
  exergonicity 240–242
  non-adiabaticity 242–243
  within geminate radical pair 237–243
  intermolecular quenching 223–230
  phosphorescent state 223–235
Electronically excited states
  localized in ligands (LL) 222
  localized in metal ion (ML) 221–222
  transition metal complexes 220–222
Exciplexes 157–218
  formation kinetics 162–180
  influence on photoreactions 206–210
  participation in photoreactions 180–201
  quenching 169–180
  triple 202–203
Excited states, magnetic resonance studies 115–133

Fick's law 105
Fluorescence detected magnetic resonance (FDMR) 120–126, 132
Free muon 2–3
Free muonium 3
Free radicals in radiation chemical aging 249–265

Ground-state charge-transfer complexes 203–205

Hydrogen isotopes 3, 27–28
Hydrogen peroxide 254
Hydroxyl radical 253

Magnetic resonance studies 43–156
  excited states 115–133
  experimental techniques 51–78
  historical overview 45–51
  radical ions 115–133
  transient radicals in liquids 75–78
Metal-to-ligand charge transfer state (MLCT) 222
Methanol
  H abstraction from 23
  reaction of H and Mu with 22, 23
Mixed valence dimer 231–232
Molecular dynamics, electron paramagnetic resonance (EPR) 99–115
Muon 1–42
  as kinetic probe 6–7, 27–37
  production and decay 7–8
Muonium 3
  atomic 12–25
  bound 25–27
  chemically bound 5–6
  rate constant for 19

reactions in aqueous solution 18–25
reactions in gases 12–18
SR data analysis 10
SR experiment 8–9
SR histograms 11

Nuclear resonance of transient radicals 133–139

Oxidative damage, effects of radiation on biological response to 257–258
Oxy-radicals 254–257

Paramagnetic transients in liquids 43–156
experimental techniques 51–78
historical overview 45–51
methods of detection 59–78
methods of generating 55–59
Phenylethyl radical 37
Photochemical electron transfer reaction of transition metal complexes 219–265
Photochemical reactions, temperature effect 199–201
Photochemistry, electron paramagnetic resonance (EPR) 83–99
Photolysis studies 55–56
Photoreaction kinetics 157–218
Photosynthesis, electron paramagnetic resonance (EPR) 92–99
Pulse technique kinetics 163–166
Pulsed lasers 56
Pulsed radical formation 53

Radiation chemical aging, free radicals in 249–265
Radiation chemical damage 251–254
Radiation chemistry, electron paramagnetic resonance (EPR) 78–83
Radiation effects on biological response to oxidative damage 257–258
Radiation-induced aging 259–262
Radical ions, magnetic resonance studies 115–133
Radiobiological effects 258–259
Radiolysis 56
Radionuclides 57–58
Rearrangement reactions 33–36
Relaxation phenomena, electron paramagnetic resonance (EPR) 100–105

Solvent polarity effect 188–198
Steady-state kinetics 166–168
Steady-state reaction 52
Steady-state studies, electron paramagnetic resonance (EPR) 79–80
Stereochemistry 180–188
Styrene polymerization 37
Superoxide radical anion 253
Symmetrical iso-valence dimer 232–233

Thermolysis 59
Transient radicals, nuclear resonance of 133–139
Transition metal complexes
electron transfer of phosphorescent state 223–235
electronically excited states of 220–222
intramolecular processes in binuclear compounds 230–235
photochemical electron transfer reaction of 219–265
room temperature phosphorescent states 221
Tunnelling factors 23
